Alex Hebbel training on the FCX Descent Control Device.

Matt Hunt demonstrating escape kits and systems to a fire department.

Practicing tower rescue from a ladder safety system.

Our Training Center

For training companies and organizations who need to teach or certify employees in rope-rescue techniques, the training center is a valuable resource. Key features in the simulation training space are a free-standing 30-ft. radio tower, a vertical wall with removable window and door plugs for bailout training, and anchors for practicing edge, raise and rescue, and hauling operations.

Conveniently located in Biddeford, Maine, the Training Center is 20 minutes south of the Portland Jetport, with easy access to Portland's scenic coastline, downtown shopping, and renowned restaurant scene.

To schedule your next training at the Sterling Training Center, contact Matt Hunt at 1-207-282-3107 or Matt.Hunt@SterlingRope.com.

Sterling's new state-of-the art training center is a testament to their commitment towards improving safe practices within work-at-height trades. Equipped with ample lighting, abundant seating, and vertical structural supports fully rated up to 5,000 pounds, the center is the ideal learning environment for rope access, arboricultural, fire/ rescue, tower, and other work-at-height trainings. The center is located within the Sterling factory, allowing guests the opportunity to observe the full life cycle of a product from its raw material state to production to testing and, finally, to quality assurance. Few companies have made such a viable investment in the industries they serve, proving Sterling not only believes in producing a highquality product, but providing the training environment for customers to learn how to use the product safely.

Our Pledge is Simple

We have committed to ourselves and to those who use and rely on our products that we'll never compromise quality; we'll never stop innovating real-world solutions, and we'll deliver the most reliable equipment possible.

At Sterling, we're proud to design and build all of our Life-Safety Rope under one roof in Biddeford, Maine. 25 years ago, we made a commitment to be a US manufacturer, to keep all our processes in-house and, as much as possible, work with US-based partners and vendors. By designing and producing here, under one roof, we can assure a better outcome, more consistency and higher quality.

Key Certifications

It's important to purchase your life-safety equipment from respected and certified manufacturers. Part of understanding this significance is knowing whether products are certified, what the certifications mean and how they are applied to each product. As an ISO 9001 Company, Sterling is proud to offer products that are 3rd party tested and meet CE, NFPA, and/or ANSI Standards on life-safety equipment.

- EN 1891 certifies personal protective equipment for the prevention of falls from a height; specifically low-stretch kernmantle ropes for climbing/access lines. Manufacturing to the CE standard ensures products meet certain quality criteria for work at height.
- ANSI Z359 is the American National Standard Safety Requirements for Personal Fall Arrest Systems, Subsystems and Components. The standard addresses the variety of equipment being developed in the rapidly growing field of Fall Protection.
- NFPA 1983 is the National Fire Protection Association's "Standard for Life-Safety Rope and Equipment for Emergency Service." This standard requires that a manufacturer is certified to ISO 9001 and specifies performance, labeling, user instruction and test method criteria for rope, connectors, descent devices, anchors and systems. Third-party testing and certification of our product to this standard ensure that our manufacturing and quality control processes deliver products and systems that work well in technical rope and life-safety applications. Look for certifications at UL's Certification Online Directory at ul.com/database.

Sewing room stitching a sewn eye onto

Twenty-five years is a long time, and we have seen a lot of change since we started in November, 1992. There were no smartphones, no Google search, faxes were just becoming the norm, and phone calls and personal visits were how you kept in touch with customers and friends. That is when Sterling was born.

We have been making the highest quality, most innovative static and dynamic rope and cord for decades. We were the first to offer a 48-carrier static sheath construction for greater durability and better handling. We came out with the first 100% polyester static rope called the HTP, and were the first to offer 100% Technora heat and abrasion resistant ropes to the fire industry; helping FDNY create the first escape kit. Even our accessory cords were constructed differently, utilizing our innovative sewn tacks and eyes. Our ropes and cords are seen on the most technical rescues, in the tallest trees, on remote missions as well as hazardous job sites and are there to get people home safely, day after day.

Throughout our 25-year history, we have grown not only our product line, but our people. We've seen young high school and college grads start with us, get married, have kids and send those kids to college. We've advanced folks from the production floor to supervisors and managers, from customer service to directing sales, from interns to engineers. Each of us has a passion for creating great product, a cool culture, and servicing wonderful customers. Our communities have grown along with

Carolyn Brodsky Founder & CEO

our involvement in them. Our products give our customers the Freedom to Focus, regardless of whether they are working on rope, using rope for safety or rescue purposes, or climbing recreationally. They can focus on the task at hand and not have to worry about their gear.

Prime Rope Shorts

Our first-quality static ropes are available in pre-packaged shorter lengths for building anchors or making short rappels.

Visit SterlingRope.com or give us a call at 1-207-282-2550 for pricing and availability.

Knots vs. Sewn Terminations

Lanyards, cows' tails, hitch cords, rope attachment points are all commonly terminated with tied knots or sewn terminations. The termination type selected is dictated by user preference or manner of use. but there are pros and cons to both:

Advantages of Sewn Terminations

- Lesshulky
- Lower reduction in breaking strength
- Uses less rope
- Eliminates user error in terminating a rope
- May help ropes to meet or maintain certain standard

First to develop a sewn eye using Technora thread for Fire Escape Ropes.

Advantages of Knots

- Saves money
- More versatile

When adding a knotted termination, there is a decrease in the overall breaking strength of the rope. The amount of strength loss depends on the type of termination and the materials involved. Additionally, the breaking strength of sewn termination is largely dictated by the construction of the stitching and, for knots, by the knot selected.

Historically, knots have been shown to reduce rope strength by 15% or more, while sewn terminations generally have a maximum reduction of 15% and occasionally will maintain 100% of the overall strength of the sewn cord.

Rope Care and Storage

Rope Bags

Made of durable nylon, these rope bags come equipped with top handles, a bottom that's grommeted for drainage, a clear front pocket and adjustable shoulder straps on the medium and large sizes.

	Volume (L)	Rope Capacity
Small	17.0	200' (of 3/8" dia.)
Medium	31.0	200' (of 1/2" dia.)
Large	45.0	400' (of 1/2" dia.)

Rope Wash

Proper care extends a rope's life expectancy and cleaning is a major component of care. Our biodegradable technical wash is available in a pre-packaged, 0.83 fl. oz. shot and provides enough to clean one rope. Available as a single packet or a box of 20.

Keep your rope clean with the Rope Tarp Plus. Constructed from a durable ripstop nylon, an oversized pocket allows you to slide in a flaked rope as well as shoes and a harness to easily transport your essentials to the work site.

The SafeGuard is designed for rope protection—a critical separator between rope and jagged edge that allows ropes to move freely while avoiding abrasion damage. Unique stacked layers of fabric prevent cutting on sharp edges. Removable plastic insert allows for smooth emergency lowering or can be removed for wrapping small diameter anchors. Length: 18"

End Labels

These are replacement heat-shrink tubes to re-label your rope after you cut the ends. Each packet comes with glue instructions for application. You can also write on the tubes with permanent marker to keep track of length and lot number from the original label. Comes in packets of 6 and three sizes: 5mm - 8mm, 9mm - 11mm and 12mm - 18mm. Source of heat not included.

Hot Knife

Hot knives are the best and most effective way to cut ropes cleanly and efficiently so they maintain strength and longevity. We have developed two versions of hot knives: a handheld unit that is good for mobile uses and a bench-mounted version that we made specifically for our factory use, which can cut a large quantity of rope quickly and efficiently. Blade Sold Separately.

Static Ropes

Low-elongation or static, ropes are a core element of any work-at-height system. We have been making the highest quality and most innovative static ropes for decades.

The Sterling name has become synonymous with durability and reliability across multiple industries at all job sites. For us, making a new rope starts with understanding how exactly it will be used in a work-access or rescue scenario, what function it needs to perform, and how it will need to handle and integrate with other tools and hardware.

Armed with extensive feedback from expert technicians in the field, we can engineer a static rope that meets a very specific set of requirements. We currently produce **nine lines of static ropes**, each designed, built and rigorously field tested to Sterling standards.

Sterling Static Rope Overview

Rope Family		Materials	Diameter	Key Characteristics
WorkPro™ p. 9		Polyester/Nylon	3/8", 7/16" and 1/2"	The smooth handling and perfectly balanced elongation of a nylon core combined with the ruggedness of a polyester sheath.
HTP™ p. 10		100% Polyester	9 mm, 3/8", 7/16", 1/2", 5/8"	Ultra-low stretch, resistance to the elements, great strength and durability in abusive conditions.
SuperStatic2™ p. 12		100% Nylon	3/8", 7/16", 1/2", 5/8"	Innovative sheath construction provides a smoother braid, reducing overall rope stiffness for ease of handling and gear compatibility, while maintaining strength and great durability.
SafetyPro™ p. 14		100% Nylon	9 mm, 10 mm, 10.5 mm, 11 mm	Carefully engineered kernmantle construction makes for a static work line with a small but important amount of stretch. Favored for rope access and rescue professionals.
VerGo™ p. 15		100% Polyester	1/2"	Double-braid line specifically designed for hauling operations on tower jobs and features maximum strength with low stretch.
Scion™ p. 16		Polyester/Nylon	7/16", 1/2"	Fully-certified dedicated double-braid arbor climbing lines for MRS and SRS climbing. Available with sewn terminations.
Tendril p. 16		Polyester/Nylon	7/16"	A lightweight and adaptable double-braid arbor climbing line. Compatible with a wide variety of climbing setups.
Atlas™ p. 17	Topic	Polyester/Nylon	1/2", 9/16", 5/8"	Double-braided arbor rigging lines that offer a tightly braided sheath to prevent picking, easy handling and massive strength.
Tech Ropes p. 18		Technora®, Spectra® and Nylon	8 mm, 3/8", 7/16", 1/2"	Use of the aramid fiber Technora grants unparalleled heat and abrasion resistance for the most challenging and hazardous work environments.

WorkPro[™]

Our newest static rope: the ultimate work horse

Our newest static rope benefits from our extensive experience working with mixed material ropes. The WorkPro uses a newly designed pre-steamed nylon core surrounded by a 32-carrier polyester sheath. This combination of fibers makes for a balanced elongation in the core and sheath so they share the load evenly—making the rope stronger than other ropes of similar construction.

All WorkPro diameters are certified to EN 1891: Type A.

The 3/8" and 7/16" are also NFPA 1983: Technical. The 1/2" is NFPA 1983: General.

The 7/16" and 1/2" also meet ANSI Z133.

I've been really happy with the 12.5 mm WorkPro™. It doesn't hurt my hands to grab as much as smallerdiameter rope, 11.7's and whatnot, but it's also not quite as heavy as some of the larger half-inch ropes. It also hasn't lost its knotability, as I've beaten it up over the course of the past season. I tend to beat things up pretty badly, so the fact that I'm still climbing on it says something for the durability of this rope. I use it with my mechanical devices, Rope Runner, Bulldog Bone, Akimbo, and I've had really good luck with all of them.

- Mac Swan, **Certified Arborist,** TRAQ, CTSP and **Sterling Field Tester**

3/8" WorkPro

Versatile static line that's ideal for rappelling, hauling, and jugging.

3 colors

NFPA 1983: Technical, EN 1891: Type A

7/16" WorkPro

Features the abrasion resistance of HTP with a soft hand and energy absorption of a nylon rope. Designed for use by arborists, rope access technicians and the military.

5 colors

NFPA 1983: Technical, EN 1891: Type A, ANSI Z133

Neon Green

1/2" WorkPro

Balance of strength and handling suited for rescue scenarios.

5 colors

NFPA 1983: General. EN 1891: Type A, ANSI Z133

$\mathsf{HTP}^{\scriptscriptstyle\mathsf{TM}}$

Ultra-low stretch, strong and durable in all conditions

When we first introduced the HTP lineup—the first 100% polyester static ropes on the market—the reaction could best be described as skeptical. There was no precedent for using it in high-impact, industrial rope applications.

A few years later, HTP are some of the most sought-after static ropes available, for many rope access, rescue or tactical applications.

This popularity is because of the HTP's many advantageous qualities thanks not only to its polyester material, but also to the construction methodology we devised to extract the most from this material: an exacting core construction for strength and unique sheath for handling. The result is solid resistance to water, chemicals, UV and abrasion and great overall handling and gear compatibility.

Sterling HTP ropes are certified to NFPA 1983:

3/8", 7/16" **Technical** 1/2", 5/8" **General**

7/16" and 1/2" also meet **ANSI Z133**.

9 mm HTP

Rope Testing

Abrasion Resistance

For years we have known that the use of Technora® offered benefits in terms of strength and heat resistance. It was also known that the use of Technora fiber offered an increased resistance to cuts and abrasion damage, but we were not able to quantify that benefit. To answer that question, our engineering department devised the following test:

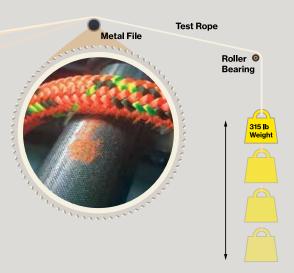

- A mass of 315 lb was attached to the test rope.
- This rope was run over a 150 degree bend, which was fitted with a steel file at the bend.
- The other end was attached to our hydraulic tensile tester.
- The load was raised up, dragging the rope 40 cm (160 degree bend) across the file, then lowered back to the ground. This process was repeated, with the file being cleaned every cycle, until the core of the rope became visible.

core or the rope became visit

We ran this test on a variety of ropes, but the benefits of the Technora fiber in the sheath were best shown on the following tests:

- Our 9 mm HTP™ (polyester sheath) went through 9 cycles before the core was exposed. A similar diameter rope, our 9 mm C-IV™, which has a Technora sheath, sustained 14 cycles on average.
- Similarly, our **7/16" HTP** (polyester sheath) rope lasted an average of 15 cycles.
- The Tech11™, with a Technora sheath, went for more than 27 cycles before the core finally showed through. In high-abrasion environments, such as steel structures, this durability keeps the equipment in service longer, and the users safer.

Abrasion Resistance Results

Rope	Number of Cycles Before Core Exposure		
9 mm HTP	9		
9 mm C-IV	14		
7/16" HTP	15		
Tech11	27		

For Tech11, see page 18.

SuperStatic2™

Ultra-smooth handling and gear integration

The SuperStatic2 line has been our go-to, all-around static rope for years. In this latest version, the core is engineered specifically to make the SuperStatic2 a more flexible and better-handling rope. It also made the ropes more round and consistently shaped from end-to-end. The SuperStatic2 ropes integrate smoothly and operate reliably with gear and hardware.

Sterling SuperStatic2 ropes are certified to NFPA 1983

3/8", 7/16" **Technical**

We had an intensive 7-day rescue course in Joshua Tree and we brought the 7/16" SuperStatic2. We put it through its paces with racks, prusiks, pulleys, mechanical devices as well as abrasive rock and it handled as well as any Sterling rope would. Great knotability and handling with very low elongation.

-John Giddings, Peak Rescue Institute

3/8" SuperStatic2

Testing Capabilities

Testing is an extremely important part of product development process as well as quality control throughout our manufacturing process. Employing the various standards allows us to track and compare the results of new designs, materials, equipment, or processes. Sometimes, however, it's necessary for us to create and carry out new test methods in order to gain new information. This new information is important in helping us design new and better products as well as improve existing ones.

Our **tensile test machine** is designed specifically to carry out slow pull tests in accordance with such standards as CI 1801 and EN 1891. It also has the capability of being modified to accomplish customized tests according to customer needs. Currently we have fixtures to test to roughly 30k pounds of force (130kN) on ropes without terminations. For ropes with eye terminations we can test to roughly 50k pounds of force (222kN). This exceeds most requirements for life-safety ropes and systems.

Our **drop tower** is designed to carry out tests in accordance with UIAA 101, EN 892, and EN 1891. Dynamic testing, or drop testing, is conducted to simulate how ropes or systems perform in fall scenarios. It has the capability of running a variety of custom test scenarios with a mass up to 100kg.

In addition to the testing above, we have the ability to perform **kits and systems tests, gear compatibility, cycle testing** as well as **flex fatigue**, to name a few. For more information about the tests we perform and the standards we test to, visit SterlingRope.com/logbook/258-sterling-test-facilities.

SafetyPro[™]

An ideal balance of strength, elongation and handling

The SafetyPro static ropes are specifically designed to meet the needs of rope access personnel. These 100% nylon static ropes hit the sweet spot for durability, elongation and knot-tying ability: essential characteristics for work-at-height. The SafetyPro series is among the most popular tools for professional rope access technicians, tower, wind turbine, and industrial workers.

Sterling SafetyPro ropes are certified to EN 1891

10, 10.5, 11 mm

Type B Type A

At RAC we primarily work in Alberta oil and gas but not exclusively, we can be Pipe Fitting, Insulating and installing EHT on one job and running maintenance on a bird sanctuary or maintenance on a hydro dam for the next job. We choose SafetyPro because of its durability and reliability. We have put SafetyPro through the roughest jobs in the most extreme environments and have never had an issue with the performance. We choose Sterling because of the second-to-none customer service and relations, competitive cost points and the ability to work with us to build custom solutions.

- Joseph Daniel, **Operations Manager, RAC Group**

1/2" VerGo

A burly 1/2" polyester load line purpose-built for the tower industry.

Scion™

Double-braid arbor climbing lines that are fully certified

The Scion's ability to absorb dynamic forces makes this rope series ideal for MRS and SRS. The 11.5 mm and the 12.5 Scion are double-braid lines featuring a burly polyester 24-strand sheath, yet engineered to have decreased elongation, soft handling and easy knotability. The durable sheath is designed to handle mechanical devices and run efficiently through hardware. Both diameters can be hand spliced and are also available with sewn terminations.

Scion Climbing Lines are Certified to **EN 1981 Type A** and meet **ANSI Z133**

Hand spliceable

Tendril™

A light, rugged option for SRS work

The Tendril's polyester sheath and double-braid construction delivers uncompromising strength no matter if the conditions are wet or dry. This lightweight, abrasion-resistant line has low elongation and a soft, balanced handling. Easy to grip with bare or gloved hands, the Tendril runs smoothly through friction hitches or mechanical devices, and resists flattening or glazing throughout heavy use. Available with sewn terminations.

Tendril Climbing Line meets ANSI Z133

Hand spliceable

Atlas™

An all-new construction for massively increased strength

The all-new Atlas has a completely redesigned double-braid construction that provides a huge increase in overall strength: over 32% stronger than the previous Atlas design. The nylon/polyester construction gives the new Atlas unmatched strengthto-weight performance for a dynamic rigging line. The tightly woven polyester sheath resists picking, and protects the core without sacrificing handling and flexibility.

Atlas™ 1/2"

The 1/2" Atlas is the go-to rope for everyday rigging with a tightly braided sheath that protects the core without sacrificing handling.

2 colors

This 9/16" Atlas rigging line has been completely redesigned. The new doublebraid construction is now 32% stronger than our previous 9/16" model.

2 colors

Atlas™ 5/8"

The 5/8" Atlas rigging line offers an MBS of 18,000 lb but still keeps the performance and handling of the thinner-diameter ropes in the series.

Living in New England we see all ends of the weather spectrum and the Atlas Rigging Line can handle it all. The 9/16" has become the workhorse in our rigging kit, with all our trucks outfitted with multiple lines. The rope's construction allows it to stretch when necessary, absorbing the load, and still continues to work well for static lifting and hauling systems. The tight cover helps protect it while keeping it looking new for years, all while being a supple rope that feels good in the hand and knots well. I have been extremely happy with the performance of the Atlas and I am excited to try the other diameters.

> - Kyle Donaldson, **Licensed Arborist** and NATS Assistant Instructor

Tech Ropes

Specialty ropes for the toughest environments

After a quarter century of building the highest quality ropes and life-safety products, Sterling static ropes have developed a reputation for quality, reliability and ease-of-use. But above all, our ropes are known for durability. Despite the inherent ruggedness of all of our static ropes, some work environments are so hazardous and so challenging that they require something special.

Enter our Tech Series: a line of static ropes that incorporate Technora®, an aramid fiber that is highly resistant to heat and cutting. We were the first to use Technora for life-safety applications like fire ropes. It's a material that we've become experts at engineering into ropes and one that allows Sterling Tech ropes to go where other ropes simply can't.

Sterling H3 Tech125, Tech11 and Tactical Response ropes are certified to NFPA 1983

Tactical Response Tech11 H3 Tech125

Technical, EN 1891: Type B General, EN 1891: Type A

Tech11 and H3 Tech11:

Sterling offers heat resistant static ropes that meet the ARC Flash criteria of ASTM F887. The ropes were 3rd party tested and meet the requirements of ANSI Z359.1, vertical lifeline component of 5,000 lb (22kN) after being exposed to the Arc Flash.

OpLux™

High-strength, cut-resistant Spectra® fibers in the core combined with a unique blended Technora sheath give the OpLux unmatched power in the most compact package.

Tactical Response™

Low weight and high strength in a compact diameter that's readily compatible with climbing and rescue hardware. Ideal for mountain rescue and tactical scenarios.

NFPA 1983: Technical EN 1891: Type B

Tech11™

The only NFPA - General rated 11 mm rope. Tech 11 is a go-to for hazardous rope access situations, such as refineries or chemical plants, as well as general rescue use.

NFPA 1983: General EN 1891: Type A

Tech125™

Extremely durable and incredibly strong. Designed with a heat-resistant sheath in a 1/2" size for use with standard rescue equipment.

H3 Tech11™

For high heat rope access and rescue scenarios, there's nothing more rugged or more capable.

Technora® Rope Testing

Heat Resistance

Environments with hot hazards, such as steam tracing pipes, can potentially be damaging to the lifelines used for access and rescue. No consensus standard exists for ropes in contact with such high heat hazards, so Sterling designed and built a specialized testing apparatus which would allow us to test ropes in contact with steel pipes at temperatures of over 700°F. Shown here is a sample of some of the results of this testing.*

Ropes were wrapped 180° around a pipe heated to 700°F with a steady load of 2 kN applied and held to 10 minutes or until failure.

Rope Name	Materials (Sheath/Core)	Time (seconds)	Max Load (kN)	Residual ABS	Control ABS	% Strength Retained
НТР™	Polyester/Polyester	37	0.3	0.0	0.0	0.0
Tech11™	Technora/Nylon	600	2.0	13.1	44.9	29.2
H3 Tech11™	Technora/Technora	600	2.0	37.8	44.5	85.0

ABS=Average break strength

^{*}This testing is by no means definitive or conclusive. A thorough Job Hazard Analysis should be conducted before working in any environment where hot hazards exist. For further information, please contact us.

Dynamic Ropes

The gold standard in multipurpose dynamic ropes

Sterling produces a full range of dynamic ropes including ropes that meet military specifications. All Sterling ropes are manufactured in the USA and are Berry Amendment compliant. With available lengths ranging from 30-80 m in standard and DryXP UIAA Certified Water Repellent finishes, plus our bicolor and bipattern options, Sterling has the dynamic rope to meet your needs. All ropes are certified to UIAA 101 and EN 892.

> Recently some of the Revac crew used several of the Nanos with the new DryXP treatment in some very atypical ways, in a frozen austere environment. Everyone present, myself included, was of the opinion that they were among

the best ropes we've ever used. Our

FAST ropes and other dynamic ropes:

FAST Ropes are available in several different configurations to accommodate different airframe attachments and user requirements. For more information on our FAST ropes and full range of dynamic ropes available in Camo and Olive Drab, please give us a call at 1-800-788-7673.

Fire Ropes

Purpose-built for crucial moments

Unlike the rest of our products, we developed our Fire Escape Ropes with the hope that they never get used. But, if they are needed, it's our job to make sure they work flawlessly without question. Most of our Fire Escape Ropes use high performing aramid yarns, such as Technora® in unique, small diameter constructions to achieve resistance to abrasion, chemicals and extreme heat. We have also assured that they can be stored compactly and handled easily if the need should arise.

We hope you never have to use these products. But if you do, know that a split-second decision to deploy your rescue rope is backed up by countless hours of R&D, testing and US-made quality construction.

Escape Ropes

NFPA 1983 Requirements for Escape Ropes: Minimum tensile strength of 13.5 kN. Elongation of at least 1% at 10% of the MBS. Diameter no smaller than 7.5 mm and no larger than 9.0 mm. Sewn eyes shall have a minimum breaking strength of at least 85% of the strength of the rope, OR shall have an MBS of not less than 13.5 kN. Fiber cannot melt at less than 400°F.

NFPA 1983: 2017 Requirements for Fire Escape Ropes: The ropes must hold 300 lb for 5 minutes at 725°F and must hold for 30 seconds at 1112°F.

Sterling Escape ropes are certified to NFPA 1983:

FireTech2 EscapeTech SafeTech 8 mm PER Fire Escape Fire Escape Fire Escape Escape

FireTech2™

An improved construction on the popular FireTech makes the FireTech2 slightly lighter weight and gives it a softer hand. Compatible with F4™ and new FCX™ descent devices.

NFPA 1983: Fire Escape

FireTech™ was the fire rope chosen by FDNY and is considered the standard for all fire escape ropes.

EscapeTech™

The most compact certified escape rope available. The nylon core construction allows for easy packing into a bag or pocket and easy payout. Compatible with F4 Descent Device.

NFPA 1983: Fire Escape

SafeTech™

A Technora sheath is resistant to high heat, chemicals and abrasion, while the core provides strength, gear compatibility and better elongation to reduce anchor loads. Compatible with FCX and F4 descent devices

A compact, lightweight and 100% nylon rope is a great economical option for escape operations.
Also available in 8 mm PER SafetyGloTM that features a reflective tracer in the sheath. Compatible with FCX and F4 descent devices.

NFPA 1983: Escape

24444

Escape ropes are available in Fire Escape Kits on page 34

Escape Systems Testing

Fire escape systems present unique challenges when it comes to testing. We developed specialized testing procedures designed to simulate real fire conditions: high heat, rollover and flashover. We subjected our anchor hooks and escape ropes to these conditions for a set period of time or until failure.

Fire Test Setup Configurations

Hook Types Tested: Lightning GT^{TM} (machined aluminum) and Crosby® (forged steel)

Rope Types Tested: 7.5 mm FireTech 2^{TM} (100% Technora®) and 8.0 mm PER (100% nylon)

System Tension: All tests were set up with a 300-lb load on each rope.

Test Temperature Goal: 1200°F for the test "room" environment, though the temperature varied by actual location.

Anchor Location: In accordance with personal escape system guidelines, we tested systems with two anchor locations:

- Remote Anchor: Simulated placement inside the room of the burning building, akin to wrapping system around a pipe or some other in-room anchor point.
- Window Sill: Attaching the hook directly to the window sill, relying on the tip of the hook to dig into the sill in order to secure the position.

Fuel Load: Tests were run with three different dry wood fuel loads: Small, Medium and Large. While these three loads were designed to burn at approximately same maximum temperature, the larger the fuel load, the faster the max temperature was achieved and the longer it was sustained. Large load is the worst -ase fire scenario.

Takeaways from this testing procedure

- No failures occurred prior to nine minutes during any test.
- Remote anchors failed sooner than sill anchors: they are exposed to more heat and direct flame.
- No Technora ropes failed when the hook was anchored at the sill.
- Aluminum hooks can begin to twist in the remote anchor configuration; however, no hook failed during any test.
- For full test results, please visit SterlingRope.com/logbook

Search Ropes

Designed for search; built to last

We know that different and challenging situations arise during fire operations. That's why Sterling was the first to use high heat resistant fibers such as Technora® and Twaron®, as well as to incorporate reflective yarns into the sheath. Our experience creating ropes with these specialty materials results in search lines that have optimal handling, high strength and great resistance to heat and abrasion.

SearchLite rope available in the new FDNY Large Area Search Kit; see page 37

RIT 900™

Hollow braid construction packs easily into a pocket or bag, can withstand up to 932°F and also resists abrasion and chemical damage.

SearchLite™

Developed for FDNY and used for search operations, SearchLite's innovative construction uses reflective fibers to increase visibility. Technora and nylon blended core enhances strength while reducing the chance of failure due to melting.

RIT Response™

The flexibility of this heatresistant rope facilitates packing and deployment, while the diameter allows it to be located and handled with gloved hands in low visibility conditions.

Water Rescue Ropes

Unique materials excel in wet environments

Swift water, ice and flooded environments present difficult challenges for rescue personnel. Our ropes perform in these harsh conditions with strength and optimal flotation. We manufacture our throwlines and water rescue ropes with the same precision and quality that we do with all of our life-safety ropes. We developed these ropes using only the best quality and highest tenacity polypropylene, nylon and Spectra® fibers.

Sterling WaterLine and GrabLine ropes are
certified to NFPA 1983

3/8" WaterLine Throwline 3/8" GrabLine Throwline

NEW Water Rescue Throwbag

A vital piece of safety equipment for swiftwater and flood rescue. Holds 75 feet of 3/8" WaterLine, GrabLine or UltraLine.

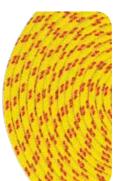

1/4" UltraLine™

Integrates a high-strength, braided Spectra core with a polypropylene sheath for superior strength over standard float ropes.

Maintains trouble-free handling characteristics and buoyancy.

3/8" UltraLine™

The same high-strength, braided Spectra core with a polypropylene sheath built into a larger diameter for gripping with gloves or larger hands.

3/8" Grabline™

A "tread-like" sheath pattern gives both rescuer and victim extra gripping power while also providing buoyancy. The nylon core adds strength and keeps the rope flexible for throw bag storage and deployment.

Kits and Systems

Quality components are the backbone of any kit or system, and Sterling has been making the best for over 25 years. However, simply having good pieces is not enough. They need to be thoughtfully integrated to ensure they function efficiently. By choosing a Sterling kit or system, you can be certain that the components will perform flawlessly together, saving time and effort regardless of the job at hand.

Kit/System	Standard	Usage	
AZTEK Elite System page 29	NFPA 1983: G (w/o carabiners)	Mechanical advantage rigging and hauling, victim pickoffs and aerial rescue

Fire Kits and Systems, See page 34

AZTEK™ Elite Systems

Powerful and versatile complete rescue systems

A unique, multifunctional system, the AZTEK is a simple and versatile tool for mechanical advantage rigging. The system has numerous uses, including as an adjustable high directional for a belay line, pickoffs and aerial rescue, and for litter scoop rigging and attendant tether, among others. The opposite end of the rope functions as an individual edge restraint system utilizing the included travel restraint and screwlink. The AZTEK Omni Block pulleys keep loads oriented correctly when tensioned. The system is easily transported or swapped between users thanks to its accessible pouch-style carry case.

Weight: 3.8 lb / MBS: 8,093 lb (NFPA - General version)

AZTEK NFPA-G Kit Includes:

(1) AZTEK Omni Block Swivel Pulleys (quantity in kit=2)

Each block is machined from high-strength aluminum for maximum strength and has an industrial-strength swiveling eye to eliminate rope twist. MBS: 8,093 lb , EN 12278

(2) 50' of 8 mm Edge Restraint with Sewn Eye

High-strength, supple cord designed specifically for the AZTEK system. The 50-ft cord features a sewn eye for clean and secure attachment to the pulley. MBS: 3,147 lb

(3) 6 mm Sewn Ratchet Prusiks (quantity in kit=2)

Two prusiks allow progress capture from either end.

(4) SafeD™ Carabiner

Aluminum with removable captive eye pin for connecting Edge Restraint to Anchor. MBS: 6,295 lb

(5) Steel Carabiner (quantity in kit=2)

Forged steel alloy in an asymmetrical D-shape for ease of use and incredible strength. Screwlock or autolock available. MBS: 10,116 lb (major axis), NFPA 1983: General

(6) 8 mm Steel Screwlink

Attaches Travel Restraint to harness.

(7) 6 mm Travel Restraint

Adjustable sewn cord tied in purcell configuration, attaches rescuer to the Edge Restraint cord and allows them to safely work along the edge.

(8) AZTEK Carrying bag

Dual compartments for separating pulley system and Edge Restraint cord.

Sterling offers four connector options:

AZTEK Elite: 2 aluminum SafeD carabiners lighten the system for mountain rescue applications with an end-to-end strength of 6,295 lbs.

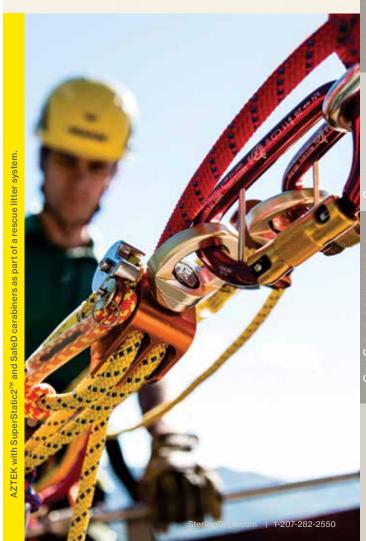

AZTEK Elite Arbor: 2 Falcon with Talon AL carabiners and does not have the edge restraint and screwlink.

AZTEK Elite NFPA-G: 2 Sterling Steel autolock carabiners offer high strength and G-rated certification and end-to-end strength over 8,000 lb.

AZTEK Elite Tactical: 2 black aluminum Hawk autolock carabiners match up with the black pulleys and sewn cord for military and SWAT operators.

Shown below: AZTEK NFPA-G

Pocket Hauler Kit

Mechanical advantage in a compact package

Don't be fooled by the Pocket Hauler's compact appearance. With our low-stretch 8 mm Edge Restraint cord, this kit is ideal for light-duty rigging, tensioning lines, adjusting directionals, positioning, piggyback hauling systems or as a rescue system, and can be set up as a 4:1 or 5:1.

Weight: 3.4 lb / MBS: 4,946 lb

Kit Includes:

(1) SR Mini-Double pulleys (quantity in kit=2)

Machined aluminum pulleys are prusik-minding and provide efficient mechanical advantage. MBS: 4,946 lb, EN 12278

(2) 50' of 8 mm cord with sewn eye

(3) Hawk™ autolock carabiners (quantity in kit=2)

Asymmetrical D-shaped carabiner made from high-quality aluminum. MBS: 6,295 lb, EN 12275

- (4) 6 mm sewn ratchet prusik
- (5) 8 mm Screwlink

(6) Carrying bag

Dual compartment for separating the pulley system and Edge Restraint cord.

Pico™ Rescue Kit

Ultra compact lifting tool

Built around our Pico Pulleys and TRC^{TM} Cord, this little kit packs a big punch. As a 4:1 mechanical advantage system, it's ideal for tensioning directionals, pickoffs, and military applications.

Weight: $2.0 \, lb / MBS$: $3,597 \, lb$

Kit Includes:

(1) 15.5 m (50') 6 mm TRC Cord with sewn eye

(2) Pico Double Pulley (quantity in kit=2)

Ultralight (only 3.3 oz each) pulleys with a balanced side plate for either single or double use. Features sealed ball bearings and prusik-minding capabilities. **MBS: 6,744 lb** (major axis, in double configuration)

- (3) Osprey™ oval screwlock carabiners (quantity in kit=2)
- (4) 5 mm TRC Prusik
- (5) Pico bag

NEW FCX Bucket Evac System

A lightweight self-evacuation kit

The FCX Bucket Evac Kit is a compact, emergency egress system beneficial for utility personnel or arborists working alone in a lift. This kit features our FCX Descent Control Device with smooth modulation for easy control with one hand as well as a spring-loaded handle that stays out of the way until loaded. When paired with the SafeTech Escape Rope, this kit provides speedy evacuation when needed most.

Weight: 3.95 lb

Kit Includes:

(1) FCX Descent Control Device

Autolocking device with anti-panic function.

(2) ANSI Snaphook

A double action snaphook made from steel. MBS 4,491 lb, ANSI Z359

(3) ASD w/ Pin Carabiner

Aluminum D-shaped carabiner with a 3,600 lb gate and threaded captive eye pin.

(4) 75' of 8.0 mm SafeTech Escape Rope

Technora sheath and a nylon core for strength, durability and heat resistance.

- (5) 24" 11/16" Nylon Sling
- (6) Water-resistant, durable low-profile storage bag

NEW Tower Rescue Kit

Simple and effective two-person rescue kit

The Tower Rescue Kit provides a complete solution for rescue of an incapacitated tower climber or other person working at height. Built on a foundation of our 11 mm HTP, this kit includes the ANSI rated D4 autolocking descender and rugged anchor sling.

The kit also features a unique textile spreader bar which allows for easy attachment to harnesses with hip rings, but no ventral attachment point.

A prebuilt mini-haul system allows for easy transfer from a fall arrest system to the descending system.

Weight: 22.4 lb for 249' rope in kit

Kit Includes:

(1) 7/16" HTP with sewn eye

(length depends on kit)

(2) D4 Descender

(3) ASD w/Pin Carabiner

Aluminum D-shaped carabiner with a captive eye pin. MBS: 6,744 lb, NFPA (T), ANSI Z359

(4) Soft Spreader Bar

with ANSI carabiners, and attachment connection

(5) 4:1 Mini Haul

(6) Anchor Sling

48" Rabbit Runner, Type 9800

(7) Storage and Carrying Bag

Tree Pulling Kit

For powerful rigging setups

Our Tree Pulling Kit provides superior mechanical advantage for big rigging jobs. Stocked with components ideal for setting up tensioning lines, tree-felling operations or speed lines, this progress-capturing system handles burly rigging operations where you need power on your side. With quick precision, you can configure the components to accomplish a 3:1, 4:1 or 5:1 mechanical advantage to get the job done. Available with or without a rope and bag.

Weight: 17.8 lb (w/bag) / MBS: 5,418 lb

Kit Includes:

- (1) RIT 9 mm Eye and Eye (36")
- (2) RIT 9 mm Bound Loop Prusik (16")
- (3) Steel AL Carabiners (quantity in kit=2)

Forged steel alloy in an asymmetrical D-shape for ease of use and incredible strength. MBS: 10,116 lb (major axis), NFPA 1983: General

(4) SR PMP2 Pulleys (quantity in kit=2)

Double Prusik Minding Pulley. Extremely high-strength and ideal for use in haul systems. They are designed to provide efficient progress capture and are compatible with ropes up to 13 mm in diameter. MBS: 9,892 lb

- (5) 150' of 1/2" HTP™
- (6) Rope Bag

Versatile friction saver

A powerful combination of our HTP Ring Sling and our RIT Ring Bound Loop Prusik, the AR Anchor allows quick adjustments when used as a primary anchor point by moving the RIT Ring Bound Loop Prusik along the Ring Sling. Because of the different-sized rings, you can retrieve the entire system from the tree once back on the ground.

Length: 60" / MBS: 5,418 lb

Kit Includes:

- (1) SafetyPro Lanyard with Aluminum Ring
- (2) RIT Bound Loop Prusik with Ring 18"

NEW PDQ2™ System / Raise and Rescue Kit

Lightweight tower evacuation system

The PDQ2 is Sterling's lightweight evacuation system for use in all work-at-height environments. The PDQ2 descent-control device and the 6 mm XTEC™ heat-resistant Technora® rope form the core of this system whose total weight is under 10 lb. Rated for a user-load of 310 lb, the fully-assembled kit comes ready for deployment and its slim profile means it can be stored compactly and carried by each technician until needed.

Weight: 8.85 lb / MBS: 3,147 lb

System Includes:

(1) PDQ2 Descent Device

Autolocking, precision-machined aluminum device features an asymmetric cam with anti-panic capabilities. **ANSI Z359.4**

(2) XTEC rope with sewn eye termination

This 6 mm cord is 100% Technora® in the sheath and core and is heat resistant over 900°F. Available in 100 M (328'), 120 M (394'), and custom lengths.

(3) ASD w/ pin carabiners (Quantity in kit = 2)

Aluminum D-shaped carabiner with a 3,600-lb gate and a threaded captive eye pin. MBS: 6,744 lb (major axis) / NFPA 1983: Technical / ANSI Z359.12

(4) Waterproof storage bag

Roll-top, low-profile storage bag with shoulder strap.

Shown with Optional Raise and Rescue Kit, which includes:

- (5) Wire anchor slings (Quantity in kit = 2)
- (6) 24" 11/16" Nylon Sling
- (7) Osprey™ oval autolock carabiners (Quantity in kit = 4) Autolocking oval aluminum carabiners. MBS: 5,171 lb / EN 12275

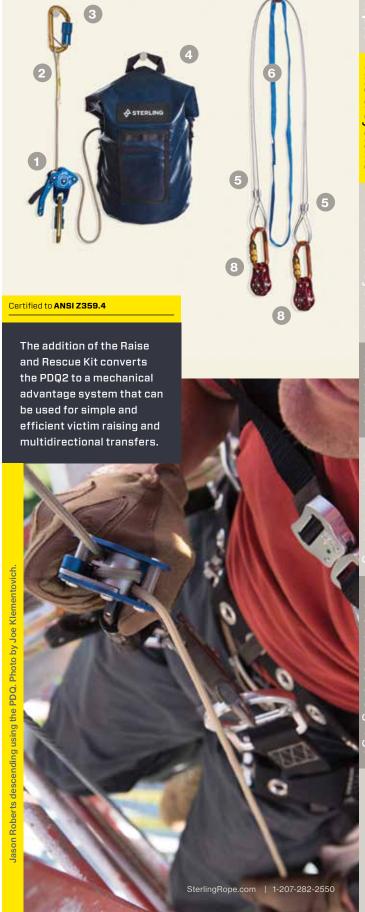

(8) Micro Pulleys (Quantity in kit = 2)

Compact, machined aluminum pulleys that work with ropes up to 7/16". MBS: 5,395 lb / EN 12278

46

We initially saw the need for a lightweight rescue and evacuation system that could be carried by individuals while working on wind turbines, where rescue is always a complicated maneuver. The PDQ2 gives our technicians the ability to react quickly with a lightweight easy-to-use system should an emergency arise.

Davide Sartoni, Training Program
 Coordinator
 Mistras Ropeworks COE

Fire Kits and Systems

The go-to choice for personal escape systems

Sterling pioneered the development of escape systems that allow rapid egress and self-rescue. Our escape kits and systems are built on a foundation of our proven ropes. In 2004, Sterling built the first 100% Technora® fire escape rope for FDNY. We now offer many options and configurations to suit the needs of various departments with different call areas. Here you'll find a list of our recommended setups, but if you need something customized to suit a unique set of requirements, contact our sales team.

Our Fire Kits and Systems

A **system** is a collection of components, certified end-to-end to the NFPA 1983 Standard for Escape Systems.

A **kit** is a collection of individuallycertified components combined to perform together.

Bailout: Rigging a Remote Anchor

When it comes to exiting an Immediately Dangerous to Life or Health (IDLH) environment, many factors need to be assessed. One primary bailout consideration is the choice of anchor. Though conditions may force the use of a sill anchor, the preferred option is to locate a suitably substantial object for remote anchor placement. In most cases, the closer to the exit point, the better. After an anchor is located, knowing how to secure the rope becomes paramount. Pictured are three options for connecting the rope.

Good

A knot can be used with any connector or hook.

Better

A hook with a hitching slot, such as the Lightning $^{\text{\scriptsize IM}}$ Hook, can easily be secured by feeding a bight of rope through the handle and passing it back over the hook itself. Very secure and faster than a knot.

Best

The Lightning GT^{TM} features a unique gated slot on the back side of the hook that allows the rope to be quickly wrapped around the handle two or more times for a secure lock-off. No need to work with extra rope, pass over the device, or tie any knots. Simply click, click and go.

Build a Custom Fire Escape Kit

1. Choose a Rope

The heart of any escape system is the rope. Sterling's ropes offer the perfect balance of strength, heat resistance, and compatibility with all the components of the escape system.

*EscapeTech only to be used with F4 Descent Device.

EscapeTech™ * NFPA 1983: Fire Escape

SafeTech™ NFPA 1983: Fire Escape

2. Choose a Descent Control Device

Safe, controlled descent is critical to escape systems. It's also important that the descent control device is auto locking, easy to use with either hand, and has good modulation characteristics.

NFPA 1983: Escape Descent Device

NFPA 1983: Escape Descent Device

3. Select an Anchor

Hooks have become a popular choice for anchors because they can be placed remotely or secured at a window sill in situations where a remote anchor is not feasible. We offer two versions of our lightweight, machined aluminum Lightning™ hooks and the classic steel Crosby® hook.

Lightning Hook™ NFPA 1983: Escape Anchor

Lightning GT Hook™ NFPA 1983: Escape Anchor

Crosby Hook NFPA 1983: Escape Anchor

4. Choose Attachments

The escape kit requires a secure connection to the fire fighter's body. Escape harnesses or belts must be lightweight, not create an additional snag hazard and be easy to integrate into turnout gear.

NFPA 1983: Heat Resistant Escape Belt

SafeD™ Carabiner NEPA 1983: Technical

Lanyard™

5. Select a Storage Option

Sterling's three storage configurations allow kits to connect to a harness and be carried in ready-to-use mode. Each of these options store 50' of rope, an anchor hook and descent device.

System with Lightning Hook.

FCX[™] Escape Systems

With the introduction of the FCX Descent Device and the FireTech2 100% Technora® escape rope, we are now able to offer a wide range of the most advanced personal escape systems available. Our FCX systems are customizable with your choice of escape rope, anchor hook and storage bag. Each of these options comes pre-assembled with SafeD^{TM} carabiners.

Certified Systems Available:

FireTech2 Systems: Certified to NFPA 1983: Escape System

- · Crosby Hook with F4-50 Bag
- Lightning GT Hook with F4-50 Bag
- Lightning GT Hook with Escape Kit Pocket Bag (optional Extension Lanyard)

SafeTech Systems: Certified to NFPA 1983: Escape System

- Lightning GT Hook with F4-50 Bag
- Lightning GT Hook with Escape Kit Pocket Bag (optional Extension Lanyard)

F4™ Escape Kits & Systems

F4 Escape kits and systems are the original, customizable personal escape setups. Built around our lean and effective F4 descent device, these kits and systems are offered in a variety of configurations. All individual components are NFPA certified and when incorporating our FireTech2 and SafeTech escape ropes, these are fully NFPA-certified systems.

Certified Systems Available:

FireTech2 System: Certified to NFPA 1983: Escape System

Certified to **NFPA 1983**: Escape System

NEW Roof Rescue Kit

Based on the FDNY configuration, this kit offers a top down rescue option for firefighters or civilians who may be stranded at a window during a structure fire. The 100% Technora H3 Tech125 offers the best heat resistance of Sterling's line of Technora ropes and features indicator markings every meter to indicate distance and speed of deployment. The attachment end features a shock pack to limit impact forces on the rescuer and the anchor. The simple-to-use D5 descender controls one- or two-person loads during a pickoff, and the included chafe guard protects against damage at the parapet.

For more information on proper use of this kit, please contact one of our recommended training companies.

Kit includes:

(1) H3 Tech 125 x 125'

with 2 sewn eyes and markers every meter

- (2) Kevlar shock pack sewn to one end
- (3) Aluminum NFPA (quantity in kit = 3)

G-rated captive eye carabiners with simple locking gates for ease of operation with gloved hands

- (4) SafeGuard rope protector
- (5) D5 Descender
- (6) Double Ended Rope Bag

For ease of access to both the operational and anchor end

Large Area Search Kits

Tools for high-hazard search situations

Search kits are an integral tool for fire departments performing large area search. We've revamped our offerings to include 3 options. The newest kit, the FDNY Search Kit, was built to the exacting specifications of FDNY. This large area search kit comes with conical distance indicators every 25 feet to indicate distance and direction to the exit. The 200 feet of rope is package in a sturdy vinyl bag with quick release shoulder strap and has a large snaphook sewn to the end for easy attachment to a stationary object. The RIT Response Kit and Sterling SearchLite Kit feature a messenger bag with 220 feet of rope and a large snaphook at one end. Rope options are the heat resistant 9 mm RIT Response rope or the 7.5 mm SearchLite with reflective tracers and a nylon/Technora core.

NEW FDNY Search Kit includes:

- (1) 200' of SearchLite rope with heat-resistant directional cones
- (2) Locking double action Aluminum Swivel Snaphook
- (3) Vinyl search bag with quick release buckle

RIT Response Kit and Sterling SearchLite Kits Include:

- (1) 220' of heat resistant search rope (RIT Response or SearchLite)
- (2) Locking double action Aluminum Snaphook
- (3) Search bag with reflective trim.
- (4) Swivel Snaphook (not shown)

Hardware

Twenty-five years of producing the most innovative, highest quality and best performing life-safety rope and cord gives us unique insight into hardware design, construction and compatibility. Using only the highest quality materials, our hardware is engineered and manufactured with precision to yield products with exceptional performance.

Carabiners

We offer a complete line of carabiners in a wide array of shapes, locking patterns and colors, most of which are rated to the highest CE and NFPA safety standards.

Descent Control

SR R8™

Our rigging and descent control devices all share a few common traits that make them uniquely Sterling: They're simple to use and they're incredibly strong and durable. We've thought through each device's intended use and then stripped away all unnecessary complications that might make a device difficult to use or suffer failures.

Cord and Webbing

Sewn Cord

We offer a wide variety of high quality and high performance cordage and cordage devices. Functional and safe cords are indispensable items for various work applications. Each cord we make meets the same high standards we apply to every Sterling product.

Name/Diameter	MBS (lb)	MBS (kN)
HollowBlock™	3,147	14.0

7 mm Head-End Litter Spider	3,822	17.0
8 mm Bound Loop Prusik	4,496	20.0

MBS=Three-sigma minimum break strength

HollowBlock™

Used as a friction hitch or autoblock and able to grab onto rope efficiently when used as a rappel backup on ropes 7 mm or larger. Our 6.8 mm HollowBlock's gripping ability comes from its hollow braid cord construction composed of strong, durable aramid fibers.

MBS: 3,147 lb / 13.5 and 19" lengths

6 mm AutoBlock

Ideal as a back-up while on long rappels, we constructed our AutoBlock from a durable 6 mm cord sewn into a 13.5-inch loop. The AutoBlock attaches from the harness to the brake-hand end of the rappel rope just below the rappel device and works as a prusik or Klemheist knot. MBS Rating (Ib): 2,810 / MBS Rating (KN): 12.5

6 mm Purcell

For tricky emergency two or three-point ascending, an adjustable connection point or self-belay, our sewn 6 mm Purcell's strength, durability and adjustability shine. Color-coded lengths provide easy identification.

MBS Rating (Ib): 2,810 / MBS Rating (kN): 12.5. Three lengths available: Chest: 20", Short: 42", Long: 68".

7 mm Bearer Tie-In

The Bearer Tie-In, also known as the Foot-End Spider, is used in sets of 2 and they attach from the foot-end of the litter to the foot-end, set-of-fours, or haul point. These cords are set up as purcells to allow for adjustment on steep angle evacuations. 7 mm x 34" sewn in a bound loop. MBS Rating (lb): 3,822 / MBS Rating (kN): 17.0

7 mm Head-End Litter Spider

The Head-End Litter Spider is used in sets of 2 and attach from the head-end of the litter to the haul point. These cords are set up as purcells to allow for adjustment on steep angle evacuations. 7 mm x 68" sewn in a bound loop. MBS Rating (lb): 3,822 / MBS Rating (kN): 17.0

8 mm Bound Loop Prusik

Provides progress capture, tandem prusik belay and optimal rope grab for rope rescue. Does away with bulky, time-consuming knots and is stronger with its sewn loop construction. MBS: 4,496 lb / 16" and 22" lengths. 6 colors (see 8 mm cord on page 43)

KH	bouna	Loop	Prusiks	

The gold-standard in friction hitch cords are heat resistant, easy to use and come in 8 mm and 9 mm versions. These prusiks offer arborists durable, versatile tools for rigging, climbing and lanyard adjustment. Available with ring. 16" length.

* Straight pull

RIT Thimble Prusik

RIT Thimble Prusik: This unique prusik uses RIT 500™ construction with a Twaron® sheath and nylon core for excellent heat and abrasion resistance. The steel thimble offers a clean connection point and provides numerous options for adjustable anchors or connections. **ANSI Z133**.

Rope Rod

The Rope Rod is designed to be used as a tether with the Rope Wrench. Triple-layer Technora® hollowbraid construction and computerized stitching make it stiff for advancing the wrench up the rope in SRS tree climbing. 13" length.

RIT Eye-and-Eyes

Our RIT Hitch Cords provide consistent friction in a wide variety of situations thanks to their tight Twaron sheaths. The 8 mm version is made from our RIT 500™ cord, which provides a firm feel and solid durability. The wider 9 mm is a 24-strand construction made with high-performing, heat-resistant Twaron and offers a softer, more flexible feel without sacrificing strength or grip.

ANSI Z133. 8 mm: 28", 30" and 32" lengths / 9 mm: 28", 30", 32" and 36" lengths.

Flex™ Hitch Cord

Our newest hitch cords are born from arborists' constant requests for ever more durable gear that is also easy to manipulate in all types of weather conditions. The Flex core is made of ultra-strong and water-resistant polyester fibers surrounded by a blended Technora/polyester sheath that provides solid abrasion resistance with enough bite to hitch firmly onto ropes. **ANSI Z133.** Available in 8 mm and 10 mm: 28", 30" and 32" lengths.

Lanyards and Fliplines

MBS=Three-sigma minimum break strength

Ultimate Positioning Lanyard™

The Ultimate Positioning Lanyard is made with our TriTech™ rope, which features a Spectra® "jacketed" core, covered by a 100% Technora® sheath. This high-tech blend creates a lanyard with high abrasion resistance, non-conductive properties, great handling and unusual longevity. This adjustable lanyard works in many situations with numerous connection options: "M" system configuration, single leg up off a bridge or two-in-one positioning with the benefit of one-handed operation to tend slack. MBS: 5,418 lb. 12' and 16' lengths.

Ultimate Positioning Lanyard Includes:

- 1. TriTech™ Lanyard (12' and 16')
- 2. RIT 8 mm Thimble Prusik
- 3. RIT 8 mm Eye and Eye 30"
- 4. ISC Micro Pulley
- 5. Osprey™ AL Carabiner
- 6. RIT 8 mm Bound Loop Prusik
- 7. (2) Sterling Falcon Talon™ Carabiners

Tech11™ Flipline

Rugged positioning lanyard that provides high abrasion and heat resistance. Features a Technora® sheath for durability and arc flash protection and a nylon core for smooth handling. Available with sewn eye and thimble, plus multiple connector options. MBS: 5,418 lb. 10' and 12' lengths.

Shown with optional steel snaphook.

TriTech™ Flipline

This 11 mm rope features our unique Technora® sheath, Spectra® inner jacket and nylon core. By combining the abrasion resistant sheath over a high strength inner jacket and pliable core, we have created a flipline that is strong and durable, yet still supple enough to move and position easily. MBS: 5,418 lb. 10', 12' and 16' lengths.

Shown with optional triple action aluminum snaphook.

Lanyards

Available in static and dynamic options, our Marathon, SafetyPro and Y-Knot lanyards allow for safe connections to rope access and positioning equipment. 0.6, 0.8, 1 m lengths / 3 versions available.

Customize Your Flipline

Our Fliplines come standard with sewn eye terminations. Further customize your flipline—cut to your preferred length and request integrated hardware from the factory. Hardware options include:

Triple Action Snaphook

ISC Steel Snaphook

ANSI Steel **Snaphook**

ASD w/ pin Carabiner

Marathon Lanvard

SafetyPro Lanyard

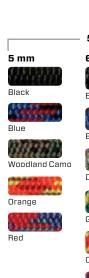

Accessory and Prusik Cord

Accessory cords are designed and produced with the same construction methods and high quality yarns as our ropes. Our 6-9 mm cords are built with the right amount of softness, yet are durable for anchor building, prusik use and other life-safety applications.

High Tenacity Cords

Some situations require high strength from a small diameter cord. Sterling developed our High Tenacity Cord line to answer these requirements. We make five distinct High Tenacity Cord models: TRC™, XTec™, V-TX™, TVac™ and PowerCord™. Each features a unique construction utilizing different combinations of high-tech materials; each cord is tuned for a given set of conditions and recommended uses.

♦STERLING

STERLING

Dog Leash

This high-performance leash is made from repurposed Sterling rope shorts for the crag dog in your life. 6-feet in length and includes a brass snaphook swivel attachment point. Made in the USA.

Mug

Coffee. Tea. Water. More coffee. Fill this stylish ceramic mug with the liquid of your choice.

Bottle Opener

Comfortably fits in your wallet, in your pocket or in your kitchen, this bottle opener is simple and effective for cracking open your favorite bottled beverage.

Logo Beanie

Keep your head warm this winter with the Sterling logo beanie. Featuring the logo knit in orange and gray. 100% acrylic, imported.

Sterling Mesh Hat

A modern adjustable ballcap with blue stitching for the logo and a gray, mesh snapback. Hat made by Richardson.

Arbor Graphic T Shirt

This soft cotton shirt features a graphic of the Sterling icon carved from wood. 100% cotton.

Sterling Logo T Shirt

A classic look with the new Sterling logo. A soft, tri-blend t-shirt with an athletic fit. Available in gray with neon green logo, blue with yellow logo and purple with silver logo.

Sterling Brandana

Made of technical material, the brandana is your classic multifunctional headwear that now comes with the Sterling Logo. Wear it in 12 or more ways. Available in green, purple or light blue. One size fits most.

Sterling Wallet

We've given our old logo banners a new life—as wallets. Available in single pocket and bi-fold, these vinyl wallets are made from the old retro logo banners that used to live in gyms, stores and at events around the country. Fits business cards and credit cards. Made in Maine by Flowfold.

Signage and Marketing

The Sterling Sales and Marketing Team is dedicated to helping you sell more Sterling products. If there is something we don't currently offer, please feel free to email us your request at Marketing@SterlingRope.com.

STERLING STERLING

Product Videos

We are continually updating our library of videos designed to give you more information on the technology and application behind each product we offer. Visit our YouTube or Vimeo channels, or contact us to download specific product videos to use in your store.

Sell Sheets and Posters

We offer a variety of informational flyers and brochures to help your customers decide which Sterling product to purchase. These are also good reference guides to help educate your employees on Sterling gear.

Stickers

We offer a variety of Sterling stickers free of charge.

Slatwall Signage

Our new eye-popping signs will draw customers to your wall of Sterling products.

Available in three designs:

- Horizontal Logo 24"x8.5" & 16"x5.5"
- Vertical Logo 12"x12" & 10"x10"
- Icon Only 12"x12" & 10"x10"

Keep an eye out for our monthly emails on new products, events, upcoming sale periods and new selling tools. We'll make sure you are up to speed on new campaigns, employees and anything else that is going on at Sterling. And, as always, keep tagging us on Facebook and Instagram and we'll keep liking and sharing.

Certifications

It's important to purchase your life-safety equipment from respected and certified manufacturers. Part of understanding this significance is knowing whether products are certified, what the certifications mean and how they are applied to each product. As an ISO 9001 Company, Sterling is proud to offer products that are 3rd party tested and meet CE, NFPA, and/or ANSI Standards on life-safety equipment.

- EN 1891 certifies personal protective equipment for the prevention of falls from a height, specifically low-stretch kernmantle ropes for climbing/access lines. Manufacturing to the CE standard ensures products meet certain quality criteria for work at height.
- ANSI Z359 is the American National Standard Safety
 Requirements for Personal Fall Arrest Systems, Subsystems
 and Components. The standard addresses the variety of
 equipment being developed in the rapidly growing field of
 Fall Protection.
- NFPA 1983 is the National Fire Protection Association's "Standard for Life-Safety Rope and Equipment for Emergency Service." This standard requires that a manufacturer is certified to ISO 9001 and specifies performance, labeling, user instruction and test method criteria for rope, connectors, descent devices, anchors and systems. Third-party testing and certification of our product to this standard ensure that our manufacturing and quality control processes deliver products and systems that work well in technical rope and life-safety applications. Look for certifications at UL's Certification Online Directory at ul.com/database.
- QSLM is not a standard, but rather a qualification program that incorporates best industry practices based on ISO 9001 certification to pre-qualify manufacturers to supply certain items to fulfill military contracts. Sterling is a QSLM vendor to the US Government.

Warning

High angle operations, fire rescue and technical rope work are potentially hazardous activities and cannot be made safe. Any person using Sterling equipment in any manner is personally responsible for learning the proper techniques involved, and assumes all risks and accepts full and complete responsibility for any and all damages or injuries of any kind, including death, which may result from misuse of any Sterling equipment.

Sterling is a certified ISO 9001 company.

Sterling Rope is a certified ISO 9001 company and all of our quality control systems are third-party audited to the standards we identify. Sterling maintains a rigorous inhouse testing program to ensure that all current production meets the standards we publish. All minimum break strength (MBS) numbers listed here are 3-Sigma MBS test results or are listed at the corresponding standard's minimum requirement. A 3-sigma MBS is based on a statistical analysis of the breaking strengths of a product and is reported at 3 standard deviations below the average breaking strength.

Safe Working Load (SWL) is the designated maximum working load for a piece of equipment or system based off a predetermined safety margin and the equipment's minimum breaking strength. Agencies and/or users should establish their own SWL guidelines for individual components and for rigged systems.

The specifications listed here are believed to be correct at time of printing. We reserve the right to make modifications or corrections. For the most up-to-date technical specifications please contact us or visit SterlingRope.com.

Product Quality and Customer Service

We guarantee our products to be free of defects and stand firmly behind the excellence of our products' design, engineering and fabrication. When used responsibly and properly, in normal and recommended conditions, Sterling products will endure, perform and wear up to world-class standards. However, no rope lasts forever. Climbing, technical work and fire exposes ropes to abrasion, fatigue, sunlight, heat and constant loading. Severe falls, lack of protection over an edge, exposure to chemicals, excessive temperatures or improper use will shorten the lifespan of any rope. These scenarios stress the importance of checking and protecting your rope. Sterling reserves the right to inspect your rope before replacing it or refunding your money. We are committed to supporting you in your climbing or work endeavors and to maximizing your overall experience with each Sterling product through the best possible product quality and customer service.
